

# Chemistry - Rocks and Soils

Fossils

## Vocabulary

<b>Igneous rock</b>	Rock that has been formed from magma or lava.	<b>Permeable</b>	Allows liquids to pass through it.
<b>Sedimentary rock</b>	Rock that has been formed by layers of sediment being pressed down hard and sticking together.	<b>Minerals</b>	A mineral is a naturally occurring inorganic solid.
<b>Metamorphic rock</b>	Rock that started out as igneous or sedimentary rock but changed due to being exposed to extreme heat or pressure.	<b>Fossil</b>	The preserved remains or imprint of a plant or animal that lived a long time ago.
<b>Sediment</b>	Tiny pieces of natural solid material that is moved and dropped off in a new place by water or wind, e.g. sand.	<b>Organic matter</b>	Material that comes from living or recently living things, such as decaying leaves and insects, which enriches soil.
<b>Magma</b>	Molten rock that remains underground.	<b>Decay</b>	To rot, decompose, break down
